

A simple and powerful performance monitoring tool that gives deep insights of your modern infrastructure and application stacks.

Get full stack observability to drive business decisions. Optimize your digital experience by aligning IT with business outcomes using Atatus. Build better software, faster with instant visibility of your applications and infrastructure. Receive proactive alerts and monitor the performance of your applications from anywhere. The tool comes with a flexible and intuitive interface that allows you to monitor your software applications easily.

“Great product for tracking bottleneck issues on production.”

- Ivan, CEO

Supported Languages

Features

Full Stack APM

Monitor and improve Application Performance. Diagnose, troubleshoot and fix your entire software stack by monitoring your applications seamlessly to improve reliability and time to market. Get full visibility of your application performance in real-time along with in-depth transaction details, slow database queries, poor performing network calls, and more

Real User Monitoring (RUM)

Identify poor front-end performance in real-time. Get end-to-end visibility on your end-user's experience including Core Web Vitals and discover how the performance is across devices, countries, applications and more. Understand how users perceive your site performance, what actions they took, and how their experience was. Understand your frontend performance and errors and how you can improve your user experience.

Infrastructure Monitoring

In-depth visibility into your Infrastructure performance. Measure how your system performs and get a complete view of health and usage of servers and hosts on real-time. Monitor your servers, dockers, kubernetes and ensure the availability and performance of any infrastructure. Make better business decisions by correlating application metrics, logs and traces to troubleshoot problems faster.

Logs Monitoring

Investigate Issues with Centralized Logging. Analyze log data with fast and intuitive search to detect and fix issues. Monitor all your log files data that is spread across multiple platforms in real time. Minimal set up, no maintenance, any scale. so you can focus on your business rather than maintaining data pipelines.

Exception Tracking

Fix errors with automated error monitoring. Monitor and fix production errors in real-time. Get complete visibility into errors so you can move faster without compromising on user experience. See the complete stack trace, telemetry, context of the error, mapped with your source code and more. See impact on your users.

Smart Notifications

Setup alerts for every stage of your application's life cycle to automatically monitor your applications for increase in response time, API failures, or error rate and much more. Integrate seamlessly with your daily applications and get notified when there are anomalies in your application and frontend code. Use the extensive library of integrations to tools like Slack, Teams, Email, PagerDuty, WebHooks and more.

Plugins Monitoring

Monitor a variety of services that are key to your application stack such as MySQL, Redis, Nginx, Apache, HAProxy to name a few. By doing this, get a comprehensive view of their corresponding metrics, get insights into what is happening on these services and be alerted when something is amiss to avoid any disruptions to your overall infrastructure.

Slow Down Causes & Traces

Every code flow is monitored for performance issues and when detected, they are captured with all the request information and function calls. With the detailed information we provide you can optimize your application with the help of this information. Detect errors, debug issues, identify performance bottlenecks, and monitor exactly what your users are doing, all without modifying your application code.

Deployment Tracking

The easiest way for DevOps teams to ship code changes with utmost confidence to any environment, anywhere. Track how each deployment behaves and it's performance impact.

Benefits

Customer Satisfaction

Customer satisfaction is the ultimate goal of any business. You can track your customer's behavior and get insights to what and why they're unhappy with your service and products and fix them. With Atatus's extraordinary features you can identify the performance issues and bugs that frustrate your customers and improve them shortly through which you can retain your customers.

Improve End-User Experience

Users expect an extraordinary experience while accessing each site and applications. You can quickly find, analyze and fix poor end-user experiences. Using a single dashboard, you can now see all of your page load metrics, google core web vitals, connection types, server response times, errors, as well as multiple real-time and historical events.

Boost Sales and Revenue

As your website grows you may not be able to see why your conversion rate is dropping. Or why you have technical errors that annoy your users. With Atatus you monitor to pinpoint the issues and to improve your application stability and usability. The tool is easy to use and gives you better conversion rates. Our tools automatically detect and analyze issues and present you with outstanding insights using which you can optimize your application.

Enhance Efficiency and Productivity

Achieve and sustain high levels of productivity by identifying and fixing errors faster. With Atatus, real-time error monitoring and automatic remediation will provide you with the insights using which you can build systems of sustainable, predictable performance. Monitor your website performance in real time and get your site up again as quickly as possible.

Enhance SEO Ranking

Google ranking is one of the most important aspects to drive customers into your website

and applications. Improve your app performance and enhance your ranking in the google search results. With high Apdex scores and great user-experience your application drives huge internet traffic to you.

Lower Operational Costs

We provide flexible pricing plans. Plans are built for teams of all sizes. You can also contact our team to construct a plan for your needs.

Who Is It For

- Developers
- DevOps Engineers
- SRE Engineers
- IT Ops Managers
- QA & Testing
- System Admins
- Application Owners

Monitoring has been made easy!!

Atatus is a platform that establishes a bridge between your software projects and the people who use them. The Atatus platform captures the ways your software is used and provides you with detailed usage data and insights in the form of actionable reports and interactive dashboards. You can use the information to continuously improve your software, better understand your users, and then, ultimately, create a better experience for your customers. Atatus also enables you to get these insights from your own data, you don't have to be a programmer to start using Atatus. Atatus is a service that allows you to focus on your application while collecting and analyzing the usage information for you.
