Supported Platforms

Features

Monitor Logs in Real-Time
Find the root cause of any performance issue with the ability to trace a chain of log events back to its original source. You can filter a particular log by date, IP address, hostname, service name and much more. The simple-to-use solution is proven and scalable, and gives you the ability to analyze and troubleshoot issues faster.

Troubleshoot Bottlenecks with Log Explorer
You can view the entire log event information in a simple and interactive way where you can save the filters and manage them as you want. You can also refresh and view all the log events with the exact log event count. Search for a specific log event that you're interested in and find out the most crucial issues to resolve them as soon as possible.

Live Log Viewer
Monitoring logs is the most tedious task. We provide live log streaming in an intuitive dashboard where you can pause the stream and view the entire log event information. Clear the entire log information for the better view and ensure whether a process has been started correctly or if a new deployment went smoothly.

Log Performance Analytics
We provide complete log information with total count of log events, alerts, log search queries, filters. You can view all the events in a graphical chart according to your preference and also with intelligent grouping features you can easily aggregate events based on hostname, services, severity and so on. Based on your choice you can modify the chart type with the options we provide.

Entire Log Story In a Single View
You can view the saved log here and you can easily access them whenever you want. You can share the all saved views with the link provided by us in a single click. You can load,

reload, share and make it favourite for easy access.

Selective Logging
Control retention of the log messages and move older logs to cost effective storage tiers based on how frequently they are accessed. This enables you to retain the messages you access more frequently, while moving the larger volume of older messages to lower cost storage. The result is lower cost and higher performance.

Integrate with APM
Correlate logs with APM Traces & Errors. Troubleshooting becomes easier if you are able to correlate the log events with the APM slow traces and errors. See exactly the set of logs that were happening in your infrastructure when the slow down happens in the APM. Get more insights and resolve issues faster.

Smart Notifications
Setup alerts for every stage of your application's life cycle to automatically monitor your logs. Integrate seamlessly with your daily applications and get notified when there are anomalies in your application and frontend code. Use the extensive library of integrations to tools like Slack, Teams, Email, PagerDuty, WebHooks and more.

Benefits

Full visibility into your app performance
Atatus allows you to experience your application the way your users do and lets you all the errors before your users could experience them. Find where your application's web pages spend the most time and fix them to provide flawless products to your customers.

Reduced Downtime
By monitoring your application proactively you can reduce the downtime of your application. Unexpected downtime may cause millions of loss to your organization. Thus, ensure the availability of your application persistently and

atatus

troubleshoot maximum issues before your customers experience them.

Improve End-User Experience

Improvement in the quality of your application creates better user experience. Customers will just drop out if your application doesn't meet their expectations. Without realizing what your customers want you might lose all of your customers. A poor performing application prompts users to look into the competitive sites. Thus use Browser Monitoring and get the deeper visibility and insights of your performance and make sure everything performs as expected.

Improve Internal Efficiency and Productivity

Finding issues in the production has become a more stressful task for everyone. Every application needs proactive monitoring to fix the issues before your customer gets impacted. Spot the bugs and issues within seconds with Browser Monitoring and reduce the unnecessary meetings to increase productivity.

Lower Operational Costs

By monitoring your application seamlessly, would cost less for developing applications. Investing in Browser Monitoring will cost far less than continued costs in fixing problems over and over and also you can invest in many new products and services to improve your business.

Speed Up Innovation

Browser Monitoring automatically finds all the issues and bugs in your application where you will get more time than before using which you can develop many new features to your application.

Boost Sales and Revenue

With higher customer satisfaction and better visibility every business owner can increase their growth and profitability. Better team performance would reduce operating costs. Thus Browser Monitoring software supports you to become more competitive and profitable on the market.

Who Is It For
